### Letter of Recommendation for Alexander Marchuk

To whom it may concern:

I am in a close relationship to Informatics at Novosibirsk since more than twenty years. In the eighties I had a chance to visit Novosibirsk a first time and I was impressed by the research and activities going on in computer science there. I had the pleasure to meet A. P. Ershov several times and also the pleasure to welcome him in our University in Gemany.

Since then I was year after year involved in the PSI conference which I considered always as an outstanding and quite unique conference.

Perspective of systems informatics covers exactly one of the high-tec areas in research. Informatics today is one of the most innovative and influencial discipline. Most of the innovation in the western world but also in other parts of this world are driven by informatics. This is not only due to the internet and to software based processes and software based tools. More and more embedded systems are changing our product and making them more competitive.

Having this in mind computer science becomes one of the key areas for modern societies and for industrial success. Therefore the organization of the conference PSI is one of the very important contributions to economy and economical growth.

(Prof. Dr. Dr. h. c. Manfred Broy)
